LORRAN DOS SANTOS SARMENTO

Software Engineer · Java / Spring Boot · Event-Driven Architecture · AWS · AI

+55 11 98788-5083 lorransarmentocontact@gmail.com linkedin.com/in/lorran-sarmento github.com/lorransantosdev São Paulo, SP

PROFESSIONAL SUMMARY

Back-end software engineer at Cielo, one of the largest payment ecosystems in Latin America, working with Java, Spring Boot, microservices and event-driven architecture in a high-criticality transactional environment on AWS. I joined as an intern and was hired full-time within 9 months. I use AI daily as a development and testing tool and, in parallel, I am building MyCarsHub, my own SaaS, from scratch. I am looking for a back-end engineering role in financial and payments products, with autonomy and practical use of AI.

PROFESSIONAL EXPERIENCE

Junior Software Engineer · Cielo, Barueri, SP, Brazil — Aug 2025 – Present

- Develops REST APIs and microservices in Java with Spring Boot and Spring Framework within the company's payments ecosystem, taking part in technical refinement and code review
- Builds asynchronous integrations between services using event-driven architecture and messaging (Apache Kafka), prioritizing decoupling and resilience in transactional flows
- Models and optimizes queries on relational databases running on AWS (Amazon Aurora), uses S3 for storage, and works with Docker containerization and continuous delivery through CI/CD
- Uses AI (GitHub Copilot) consistently in development and test writing, speeding up delivery while keeping a critical review of the code

Technology Intern · Cielo, São Paulo, SP, Brazil — Nov 2024 – Aug 2025

- Worked on Java back-end tasks with Spring Boot and Oracle SQL queries, contributing to fixes, improvements and support of production services
- Hired full-time as Junior Software Engineer within 9 months, taking on more complex work on the same team

PROJECTS

MyCarsHub · Vehicle rental management SaaS — 2025 – Present

- Platform for people who rent out financed cars and lose control of their operation in spreadsheets; the MVP covers vehicle registration, contracts and payments
- Java back-end with Spring, Google sign-in (OAuth 2.0), PostgreSQL persistence, Angular front-end and automated deployment through CI/CD, with the whole stack on free tiers
- Built with AI as a pair programmer and developed in public: every technical decision is documented and turned into content for the audience

EDUCATION

Bachelor's Degree in Software Engineering — Expected graduation: Dec 2027

FIAP — São Paulo, SP, Brazil

TECHNICAL SKILLS

Back-end: Java, Spring Boot, Spring Framework
Front-end: Angular, TypeScript
Cloud & Infra: AWS (Amazon Aurora, S3), Docker
Messaging & Events: Apache Kafka, event-driven architecture, microservices
APIs & Integration: REST, OAuth 2.0
Applied AI: GitHub Copilot, Claude, Codex — development, testing, automation and agents
DevOps & CI/CD: Git, GitHub, CI/CD pipelines
Databases: Oracle SQL, PostgreSQL, Amazon Aurora
Practices: Microservices, OOP, Code Review, Testing, Scrum

CERTIFICATIONS & ACHIEVEMENTS

- Two-time winner of FIAP's Global Solution: PROTECH THE FUTURE (2025) and SPACE CONNECT (2026) editions
- Spring Boot 3: build a REST API in Java · Java and Spring tracks: OOP, REST APIs and persistence – Alura (plus 11 other technology certificates)
- @lorrandev – 13,600+ people follow my technical content (LinkedIn 5,800 · Instagram 3,500 · YouTube 2,930 · TikTok 1,400)
